

P21366.A07

S 459/US/Div/Cont

AMENDMENTS TO THE CLAIMS

Following is a complete listing of the claims:

---

Claim 1. (*Previously Amended*) A chassis for an in-line skate, said chassis comprising:  
at least one substantially horizontal foot-bearing portion;  
one longitudinally extending lateral flange extending downwardly from said foot-bearing portion, and one longitudinally extending medial flange extending downwardly from said foot-bearing portion;

each of said lateral flange and said medial flange having a top portion and a bottom portion, wherein:

both said top portions of said lateral flange and said medial flange being transversely spaced apart and both said bottom portions of said lateral flange and said medial flange being adapted to have attached therebetween at least one wheel;

each of said lateral flange and said medial flange further having a stiffening rib, said stiffening rib having been made by pressing, extending longitudinally other than in a straight line.

Claim 2. (*Previously Amended*) A chassis for an in-line skate, said chassis comprising:  
at least one substantially horizontal foot-bearing portion;  
one longitudinally extending lateral flange extending downwardly from said foot-bearing portion, and one longitudinally extending medial flange extending downwardly from said

P21366.A07

S 459/US/Div/Cont

foot-bearing portion;

each of said lateral flange and said medial flange having a top portion and a bottom portion, wherein:

both said top portions of said lateral flange and said medial flange being transversely spaced apart and both said bottom portions of said lateral flange and said medial flange being adapted to have attached therebetween at least one wheel;

each of said lateral flange and said medial flange having a stiffening rib, said stiffening rib having been made by pressing, extending longitudinally other than in a straight line;

each of said stiffening rib of said lateral flange and said stiffening rib of said medial flange comprises opposite ends, each of said stiffening ribs being continuous between said opposite ends.

Claim 3. (*Original*) A chassis according to claim 1, wherein at least one of said lateral and medial flanges includes a cut-out.

Claim 4. (*Original*) A chassis according to claim 1, wherein said stiffening rib of at least one of said lateral and medial flanges projects inwardly.

Claim 5. (*Original*) A chassis according to claim 1, wherein said stiffening rib of at least one of said lateral and medial flanges projects outwardly.

P21366.A07

S 459/US/Div/Cont

Claim 6. (*Previously Amended*) A chassis for an in-line skate, said chassis comprising:  
at least one substantially horizontal foot-bearing portion;  
one longitudinally extending lateral flange extending downwardly from said foot-bearing portion, and one longitudinally extending medial flange extending downwardly from said foot-bearing portion;  
each of said lateral flange and said medial flange having a top portion and a bottom portion, wherein:  
both said top portions of said lateral flange and said medial flange being transversely spaced apart and both said bottom portions of said lateral flange and said medial flange being adapted to have attached therebetween at least one wheel;  
each of said lateral flange and said medial flange having a non-circular boss, said boss having been made by pressing, said boss extending longitudinally other than in a straight line.

Claim 7. (*Currently Amended*) An in-line skate comprising:  
at least one substantially horizontal foot-bearing portion;  
one longitudinally extending lateral flange extending downwardly from said foot-bearing portion, said lateral flange comprising a metal, said metal at least partly including aluminum;  
one longitudinally extending medial flange extending downwardly from said foot-bearing portion, said medial lateral flange comprising a metal, said metal at least partly including aluminum;

P21366.A07

S 459/US/Div/Cont

each of said lateral flange and said medial flange having a top portion, and a bottom portion substantially coplanar with said top portion, wherein:

both said top portions of said lateral flange and said medial flange being equally transversely spaced apart and being adapted to have attached therebetween at least one wheel;

each of said lateral flange and said medial flange further having an intermediate portion having been made by pressing, substantially non-coplanar with said bottom portions of said lateral flange and said medial flange.

*Cl*  
Claim 8. (*Currently Amended*) An in-line skate A-chassis according to claim 7, wherein each of said lateral and medial flanges extends continuously between said top portion and said bottom portion via said intermediate portion.

Claim 9. (*Previously Amended*) An in-line skate comprising:

at least one longitudinally extending foot-bearing portion;

one longitudinally extending lateral flange extending downwardly from said foot-bearing portion and having a lateral top portion, and a lateral bottom portion adapted to have attached thereto at least one wheel;

one longitudinally extending medial flange extending downwardly from said foot-bearing portion and having a medial top portion, and a medial bottom portion adapted to have attached thereto at least one wheel;

said lateral top portion being spaced apart by a first distance from said medial top portion;

P21366.A07

S 459/US/Div/Cont

said lateral bottom portion being spaced apart by said first distance from said medial bottom portion;

said lateral flange further having a lateral intermediate portion having been made by pressing, said lateral intermediate portion being substantially non-coplanar with said lateral bottom portion;

said medial flange further having a medial intermediate portion having been made by pressing, said medial intermediate portion being substantially non-coplanar with said medial bottom portion;

C  
said lateral intermediate portion being spaced apart by a second distance from said medial intermediate portion, said second distance being different from said first distance.

Claim 10. (*Original*) An in-line skate according to claim 9, wherein said lateral flange extends continuously from said lateral top portion to said lateral bottom portion via said lateral intermediate portion, and said medial flange extends continuously between said medial top portion and said medial bottom portion via said medial intermediate portion.

Claim 11. (*Original*) An in-line skate according to claim 9, wherein said lateral intermediate portion has a longitudinally curved contour.

Claim 12. (*Previously Amended*) An in-line skate comprising:

at least one longitudinally extending foot-bearing portion;

one longitudinally extending lateral flange extending downwardly from said foot-bearing portion and having a lateral top portion, a lateral bottom portion adapted to have

P21366.A07

S 459/US/Div/Cont

attached thereto at least one wheel and a lateral intermediate portion;

one longitudinally extending medial flange extending downwardly from said foot-bearing portion and having a medial top portion, a medial bottom portion adapted to have attached thereto at least one wheel and a medial intermediate portion;

said lateral top portion being spaced apart by a first distance from said medial top portion;

said lateral bottom portion being spaced apart by said first distance from said medial bottom portion;

at least one of said lateral intermediate portion and said medial intermediate portion having been made by pressing and being substantially non-coplanar with said lateral bottom portion;

said lateral intermediate portion being spaced apart by a second distance from said medial intermediate portion, said second distance being different from said first distance.

*Claim 13. (Previously Added)* A chassis according to claim 1, wherein said top portion of each of said lateral and medial flanges is adjacent to said foot-bearing portion.

*Claim 14. (Previously Added)* A chassis according to claim 1, wherein said stiffening rib of said lateral flange has an end extending downwardly toward an end of said lateral flange, and said stiffening rib of said medial flange has an end extending downwardly toward an end of said medial flange.

P21366.A07

S 459/US/Div/Cont

*Claim 15. (Previously Amended)* A chassis for an in-line skate, said chassis comprising:

at least one substantially horizontal foot-bearing portion;

one longitudinally extending lateral flange extending downwardly from said foot-bearing portion, and one longitudinally extending medial flange extending downwardly from said foot-bearing portion;

each of said lateral flange and said medial flange having a top portion and a bottom portion, wherein:

both said top portions of said lateral flange and said medial flange being transversely spaced apart and both said bottom portions of said lateral flange and said medial flange being adapted to have attached therebetween at least one wheel;

each of said lateral flange and said medial flange further having a stiffening rib, said stiffening rib having been made by pressing, extending longitudinally other than in a straight line;

said stiffening rib of said lateral flange and said stiffening rib of said medial flange have longitudinally extending curved shapes, said curved shapes having a downwardly facing concavity.

*Claim 16. (Previously Amended)* A chassis for an in-line skate, said chassis comprising:

at least one substantially horizontal foot-bearing portion;

one longitudinally extending lateral flange extending downwardly from said foot-bearing portion, and one longitudinally extending medial flange extending downwardly from said

P21366.A07

S 459/US/Div/Cont

foot-bearing portion;

each of said lateral flange and said medial flange having a top portion and a bottom portion, wherein:

both said top portions of said lateral flange and said medial flange being transversely spaced apart and both said bottom portions of said lateral flange and said medial flange being adapted to have attached therebetween at least one wheel;

each of said lateral flange and said medial flange further having a stiffening rib, said stiffening rib having been made by pressing, extending longitudinally other than in a straight line;

both said stiffening rib of said lateral flange and said stiffening rib of said medial flange have a longitudinal portion intermediate of opposite ends, said intermediate portion having a higher elevation relative to said opposite ends.

*Claim 17. (Previously Added) A chassis according to claim 1, wherein:*

both of said lateral and medial flanges include a front end portion and a rear end portion;

said front end portion includes top and bottom edges, both of said top and bottom edges of said front end portion extending both forwardly and downwardly; and

said rear end portion includes top and bottom edges, both of said top and bottom edges of said rear end portion extending both rearwardly and downwardly.

P21366.A07

S 459/US/Div/Cont

Claim 18. (*Previously Added*) A chassis according to claim 1, wherein:

both of said lateral and medial flanges comprise means for attaching said at least one wheel to said lateral and medial flanges, said means being arranged longitudinally along said lateral and medial flanges; and

said stiffening rib of each of said lateral and medial flanges are positioned above said means for attaching.

C1

Claim 19. (*Canceled*)

Claim 20. (*Previously Added*) A chassis according to claim 1, wherein said lateral flange, said medial flange, and said foot-bearing portions, in transverse cross section, comprise a substantially U-shape.

Claim 21. (*Previously Added*) A chassis according to claim 1, wherein said at least one foot-bearing portion, said lateral flange, and said medial flange are formed as a single piece.

Claim 22. (*Previously Added*) A chassis according to claim 1, wherein said at least one foot-bearing portion comprises two longitudinally spaced-apart foot-bearing portions, and wherein said two longitudinally spaced-apart foot-bearing portions, said lateral flange, and said medial flange are formed as a single piece.

P21366.A07

S 459/US/Div/Cont

**Claim 23. (*Previously Added*)** A chassis according to claim 6, wherein said top portion of each of said lateral and medial flanges is adjacent to said foot-bearing portion.

**Claim 24. (*Previously Added*)** A chassis according to claim 6, wherein each of said lateral and medial flanges have a plurality of holes for receiving axles of wheels adapted to be positioned between said lateral and medial flanges, and wherein said bosses do not surround said holes.

**C1**  
**Claim 25. (*Previously Added*)** A chassis according to claim 24, further comprising a plurality of in-line wheels mounted between said lateral and medial flanges.

**Claim 26. (*Previously Added*)** A chassis according to claim 6, wherein each of said lateral and medial flanges have a plurality of holes for receiving axles of wheels adapted to be positioned between said lateral and medial flanges, and wherein said bosses are spaced from said holes.

**Claim 27. (*Previously Added*)** A chassis according to claim 26, further comprising a plurality of in-line wheels mounted between said lateral and medial flanges.

**Claim 28. (*Currently Amended*)** An in-line skate A chassis according to claim 7, wherein said top portion of each of said lateral and medial flanges is adjacent to said foot-bearing portion.

P21366.A07

S 459/US/Div/Cont

Claim 29. (*Currently Amended*) An in-line skate A-chassis according to claim 9, wherein said top portion of each of said lateral and medial flanges is adjacent to said foot-bearing portion.

Claim 30. (*Currently Amended*) An in-line skate A-chassis according to claim 12, wherein said top portion of each of said lateral and medial flanges is adjacent to said foot-bearing portion.
